

User Manual:

Once the program running, you will be asked to give your weight. Using the number keys on the keyboard, enter your weight to the closest whole pound without a decimal or and symbol or abbreviation. For example, a correct input for this part is “150” not “150lb” or “150.1”. Next the program will ask for you to give the number of minutes it has been since your last drink, here you will give similar input as you did with your weight. Without giving a decimal point or an abbreviation you should enter the whole number of minutes it has been since you have had a drink, correct input for this part would be “90”, not “1hr 30min” or “90.03”. Next The program will ask that you enter a character representing your gender, the capitol 'M' for male and capitol 'F' for female it is important that you enter the capitol of these letters and not the lower case. Once you have typed the letter representing your gender enter it into the program, if you have given an incorrect character for your gender the program will ask you again to enter a character representing your gender. Once you have entered that you are male or female then the program will give you a chart. This chart is based off of your weight, gender, and the number of minutes it has been since you had a drink. After the summary of the information given at the top reading something like “150 pounds, male, 90 minutes since last drink,” it gives a chart with the number of drinks on the right, and the BAC as a result of the number of drinks, as well as the impairment that the BAC results in. After reading the chart you are able to then end the program by typing any number and entering it into the program.
